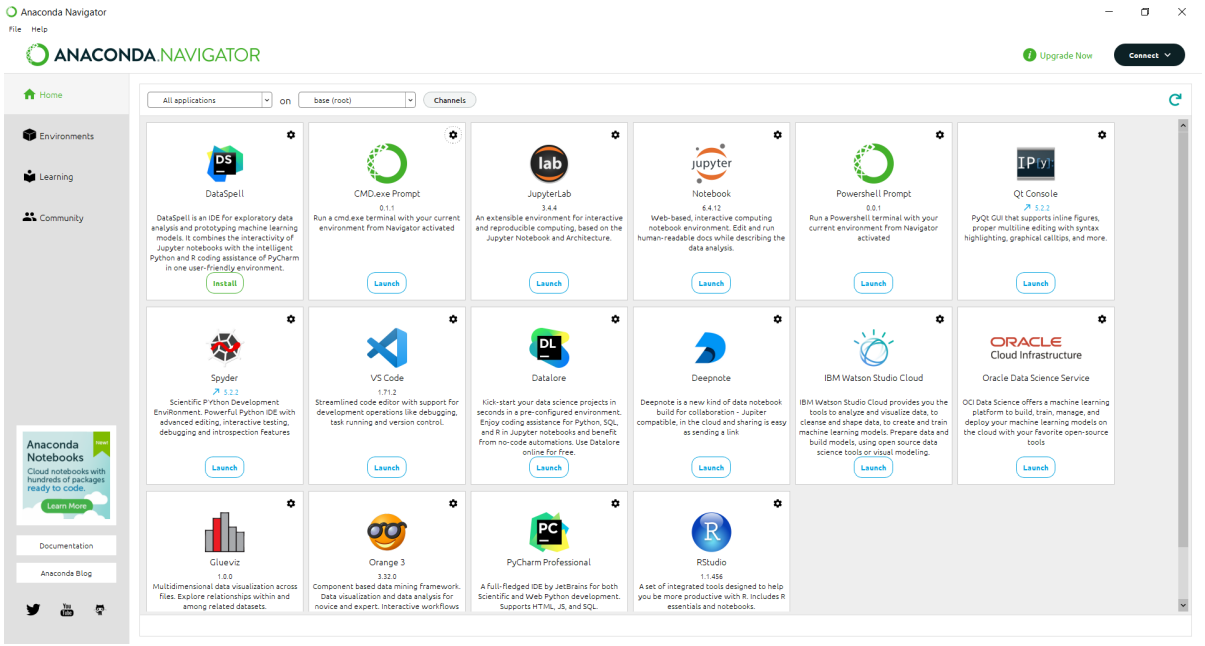
PRE-REQUISITES

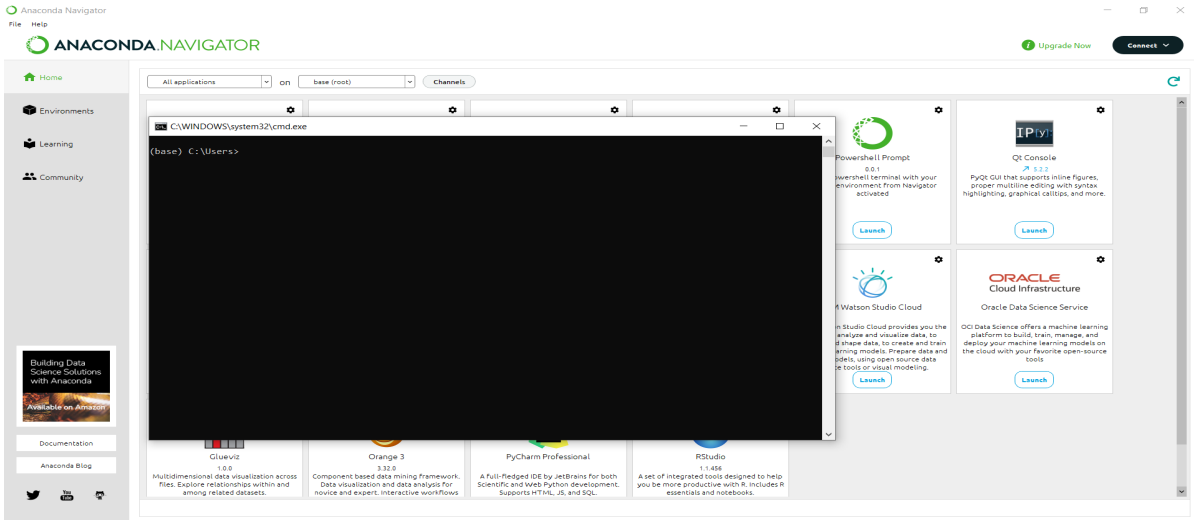
Install Python Packages

Team ID	PNT2022TMID47303
Project Name	University Admit Eligibility Predictor

Step 1 : Open the anaconda navigator



Step 2 : Open the Command prompt in the Anaconda navigator

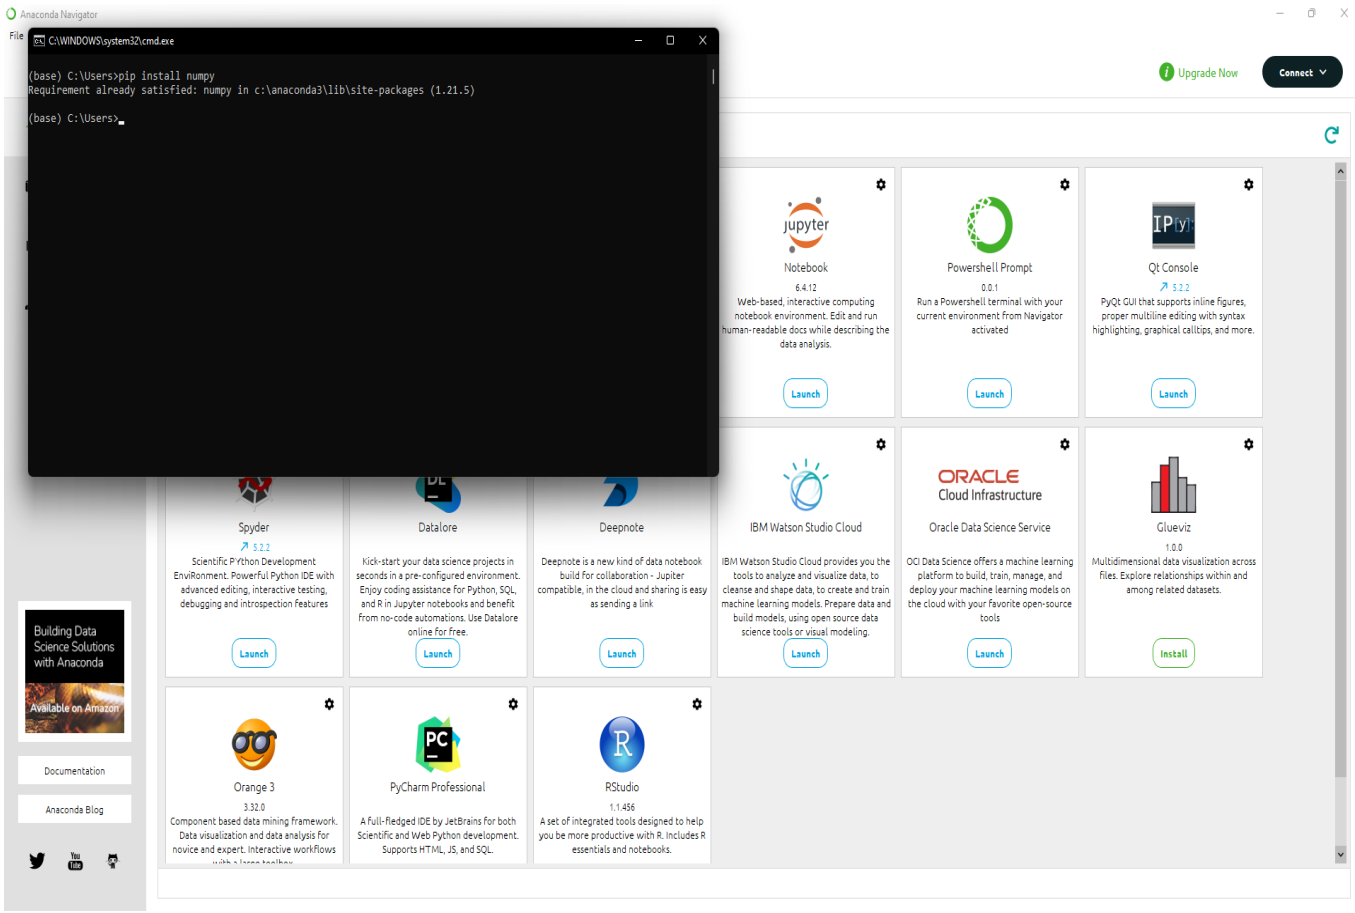


Step 3 : To install the numpy package enter the command in the CMD.exe

Command : pip install numpy

Numpy :

This package is used to perform numerical computations. NumPy is used for working with arrays. NumPy is short for "Numerical Python".

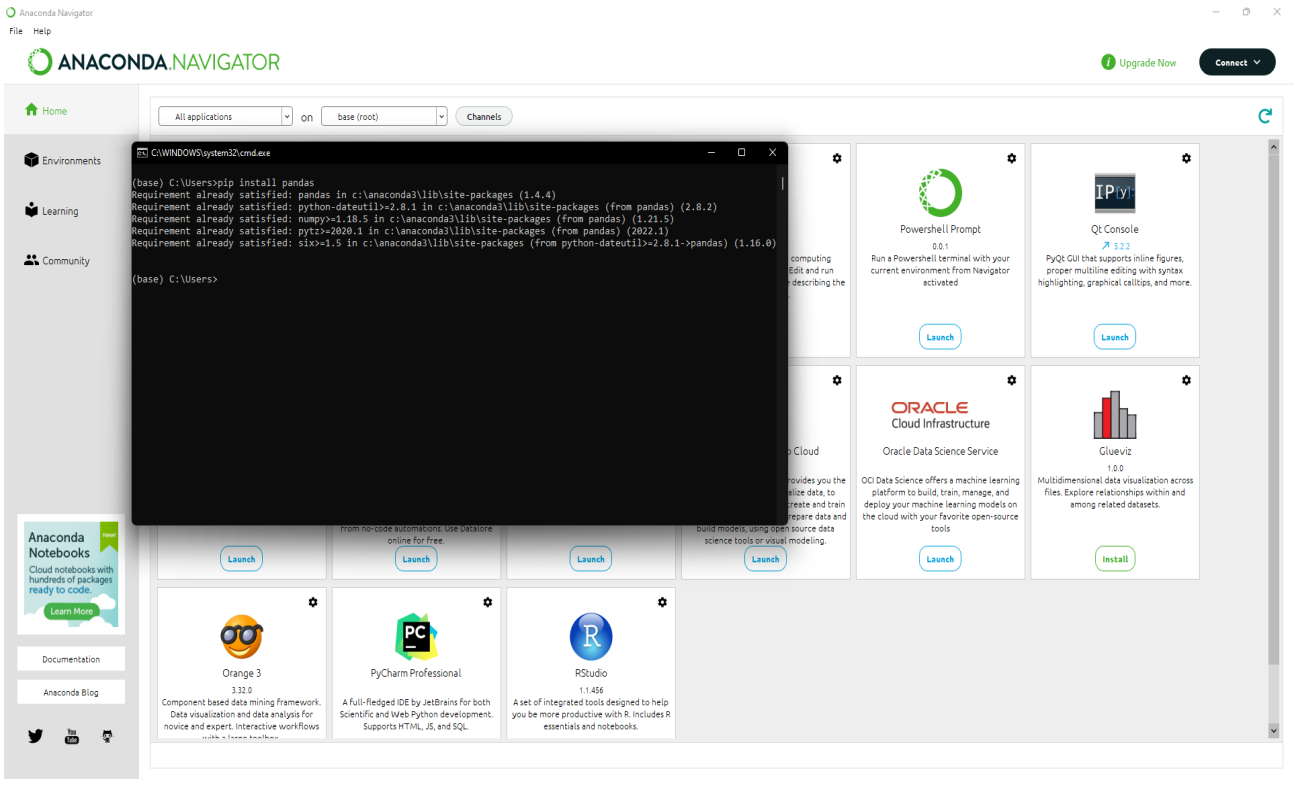


Step 4 : To install the PANDAS package type the following command

Command : pip install pandas

Pandas :

This package is used for data science/data analysis and machine learning tasks . Pandas is used to analyze data. Pandas stands for “Python Data Analysis Library”.

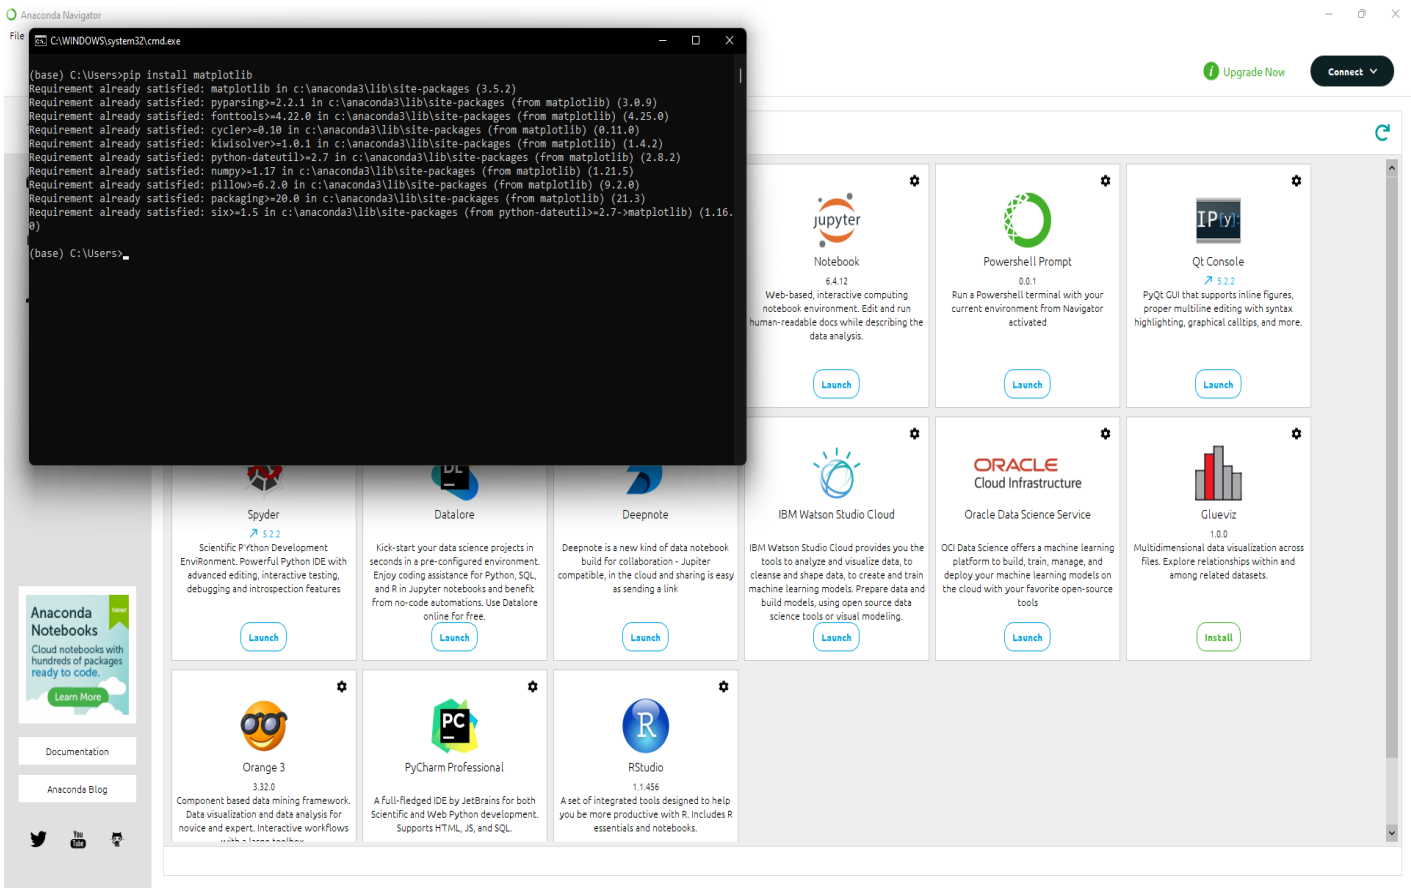


Step 5 : To install the MATPLOTLIB package type the following command

Command : pip install matplotlib

Matplotlib :

This package is used for creating static, animated, and interactive visualizations in Python.

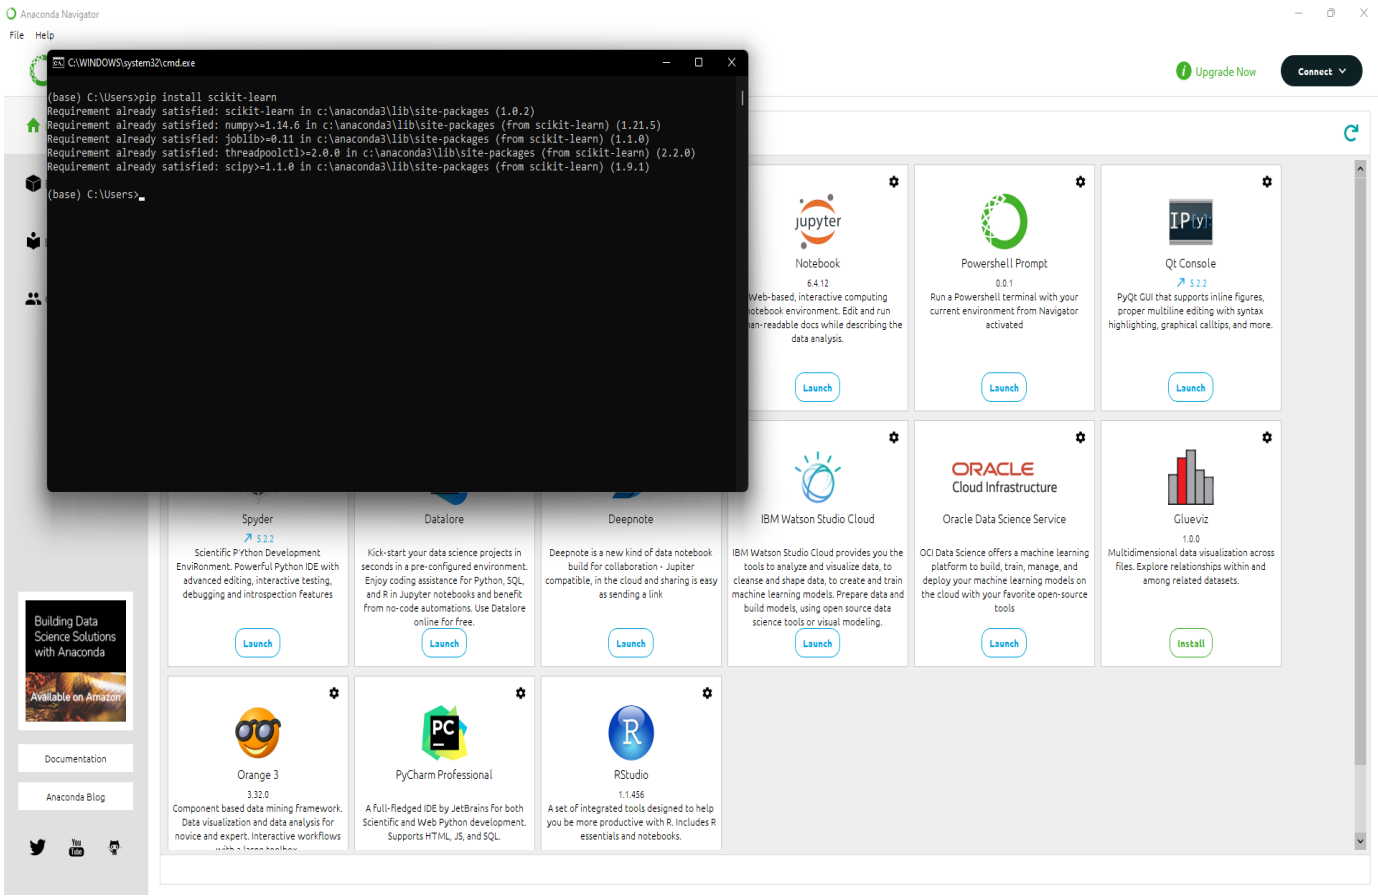


Step 6 : To install the SCIKIT-LEARN package type the following command

Command : pip install scikit-learn

Scikit-Learn :

This package provides a selection of efficient tools for machine learning and statistical modeling including classification, regression, clustering and dimensionality reduction via a consistent interface in Python.



Step 7 : To install the FLASK package type the following command

Command : pip install flask

Flask :

This package is used for developing web applications using python, implemented on Werkzeug and Jinja2.
