

Problem Statement:

In India every year lakhs of students are getting the graduation degree and willing to join post-graduation in other countries. Newly graduate students usually are not knowledgeable of the requirements and the procedures of the postgraduate admission and might spend a considerable amount of money to get advice from consultancy organizations to help them identify their admission chances. Human consultants and calculations might be biased and inaccurate.

What if there is a system that could guide the eligibility of Indian students and predict the possibilities of chance of admission in those universities according to their profile and score based on their Test attributes like GRE (Verbal and Quant), TOEFL, LOR, CGPA etc. So, the idea behind 'University Admit Eligibility Predictor' is the context mentioned above.
